Sign In Failure - Invalid Credentials

Issue: Users are unable to sign in when providing invalid credentials.

Steps to Reproduce:

1. Open the application sign-in page.

2. Enter an incorrect username and password.

3. Click the sign-in button.

Expected Result: Application should display an error message stating 'Invalid username or password'.

Actual Result: Application crashes with a server error (500).

Severity: High

Root Cause: Improper exception handling for invalid credentials.
